Jeremiah Emrich

Haven, KS (Remote) • github.com/jemrich18 • linkedin.com/in/jeremiah-e-064bb0391

SUMMARY

Full-stack Python developer and AI Engineer specializing in LLM application development, RAG pipelines, and production-grade web applications. Built and deployed AI-powered tools using LangChain, LangGraph, OpenAI API, and vector databases alongside Django REST Framework backends, React frontends, and PostgreSQL databases — all within 10 months of starting to code. Seven live deployed projects demonstrating real-world problem solving across multiple domains. Seeking a remote full-stack or AI application developer role.

TECHNICAL SKILLS

Languages & Frameworks: Python, Django, Django REST Framework, JavaScript, React, SQL
AI & LLM: LangChain, LangGraph, OpenAI API, RAG Pipelines, Prompt Engineering, Chain Architecture
Vector & Knowledge Systems: ChromaDB, Vector Databases, Knowledge Base Design, Document Retrieval, pdfplumber
LLM Integration: GPT-4o-mini, Function Calling, Structured Outputs, Pydantic Validation, Embeddings
Databases & Infrastructure: PostgreSQL, SQLite, REST APIs, Railway, Git, GitHub, UV
Frontend: React, Token Authentication, CRUD Operations, Responsive UI
Data: Pandas, NumPy, Scikit-learn, Jupyter Notebook

AI PROJECTS

Job Application Assistant | *Django · RAG · LangChain · OpenAI · ChromaDB · pdfplumber · Railway* fitformyrole.com

- Production RAG application that ingests resume PDFs, embeds content into a vector database (ChromaDB), and retrieves relevant context against job descriptions
- Engineered prompts to score resume-to-job match percentage, identify specific skill gaps, and generate tailored cover letters in a consistent structured format
- Designed multi-step pipeline: PDF parsing → text chunking → embedding → vector retrieval → prompt construction → GPT-4o-mini completion → structured output
- Used personally against live job postings — achieved 75% match score with real-time cover letter generation
- Deployed to Railway with custom domain at fitformyrole.com

Hunting AI Assistant | *Django · LangGraph · LangChain · OpenAI · Railway* aihuntingchat.com

- AI agent using LangGraph state machines to route complex hunting queries through a structured domain-specific knowledge base
- Engineered a multi-node graph architecture handling query classification, knowledge retrieval, and response generation across 10+ hunting topics
- Knowledge base covers OTC tag availability by state, bow tuning specifications, rut phase timing, kinetic energy requirements, and state wildlife regulations
- Prompt engineering focused on accurate domain-specific responses while preventing hallucination on regulation-sensitive topics
- Deployed to Railway with custom domain at aihuntingchat.com

FULL-STACK PROJECTS

WeatherRack | *Django · Open-Meteo API · PostgreSQL · Railway* https://www.theweatherrack.com/

- Pulls 10-day forecast data from Open-Meteo API and applies multi-variable scoring logic to rank conditions against deer movement variables for optimal hunting dates
- Demonstrates structured reasoning system design; planned foundation for AI-powered condition forecasting
- Features location management, moon phase data, and responsive dark UI

Budget App | *Django REST Framework · React · PostgreSQL · Railway* budgetappreactdrf-production.up.railway.app

- Full-stack budget tracking platform with DRF backend and React frontend; planned foundation for AI-powered personal finance advisor using LangChain
- Implemented token authentication, serializers, full CRUD operations, category management, and expense visualization

GolfBros | *Django REST Framework · React · PostgreSQL · Railway* https://www.golfbros.org/

- Full-stack golf blog platform with DRF backend and React frontend

- User authentication, full CRUD for posts and rounds, PostgreSQL on Railway

Archery Answers | *Django · PostgreSQL · Railway* archeryanswers-production.up.railway.app

- Arrow ballistics calculator allowing archers to configure arrow components and get real-world performance results
- Users can save custom builds and compare setups — domain-specific tool built for a real community

End-to-End Personal Finance Data Analysis | *Python · Pandas · SQLite · Scikit-learn* github.com/jemrich18/end-to-end-finance-data-analysis

- Full data pipeline from raw CSV through SQL analysis, visualization, and Linear Regression forecasting
- Demonstrates data understanding that informs better AI prompt and retrieval design

Developer Portfolio | *Django · Railway* jemrich.dev

- Personal portfolio site built and deployed in Django showcasing all projects, skills, and contact information

EDUCATION

Bachelor of Science, Computer Science — University of Maryland Global Campus | *In Progress*

Associate of Applied Science — WSU Tech | *2019 – 2021*
