SUMMARY

Full-stack Python developer and AI engineer specializing in LLM application development, RAG pipelines, and production-grade Django applications. Built and deployed six live projects using LangChain, LangGraph, OpenAI API, and vector databases alongside Django REST Framework backends, React frontends, and PostgreSQL — all within 10 months of starting to code. Seeking a remote full-stack or AI application developer role.

TECHNICAL SKILLS

Languages & Frameworks: Python, Django, Django REST Framework, JavaScript, React, SQL
AI & LLM: LangChain, LangGraph, OpenAI API, RAG Pipelines, Prompt Engineering, Chain Architecture
Vector & Knowledge Systems: ChromaDB, Vector Databases, Knowledge Base Design, Document Retrieval, pdfplumber
LLM Integration: GPT-4o-mini, Function Calling, Structured Outputs, Pydantic Validation, Embeddings
Databases & Infrastructure: PostgreSQL, SQLite, REST APIs, Railway, Docker, Git, GitHub
Frontend: React, Token Authentication, CRUD Operations, Responsive UI
Data: Pandas, NumPy, Scikit-learn, Jupyter Notebook

AI PROJECTS

Job Application Assistant | *Django · RAG · LangChain · OpenAI · ChromaDB · pdfplumber · Railway* fitformyrole.com

- RAG pipeline that parses resume PDFs, embeds content into ChromaDB, and retrieves relevant context against job descriptions to score match percentage and identify skill gaps
- Engineered multi-step pipeline: PDF parsing → chunking → embedding → vector retrieval → prompt construction → GPT-4o-mini → structured output
- Generates tailored cover letters in a consistent structured format — used personally against live job postings with 75% match scores
- Deployed with custom domain at fitformyrole.com

Hunting AI Assistant | *Django · LangGraph · LangChain · OpenAI · Railway* aihuntingchat.com

- LangGraph state machine agent that routes hunting queries through a multi-node graph: query classification → knowledge retrieval → response generation
- Structured knowledge base covers OTC tags by state, rut timing, bow tuning, kinetic energy requirements, and wildlife regulations across 10+ topic domains
- Prompt engineering focused on preventing hallucination on regulation-sensitive topics where accuracy is critical
- Deployed with custom domain at aihuntingchat.com

FULL-STACK PROJECTS

WeatherRack | *Django · Open-Meteo API · PostgreSQL · Railway* theweatherrack.com

- Pulls 10-day forecast data from Open-Meteo API and applies multi-variable scoring logic across wind, pressure, temperature, and moon phase to rank optimal hunting days
- Features location management, moon phase data, and responsive dark UI

Budget App | *Django REST Framework · React · PostgreSQL · Railway* Live Site

- Full-stack budget tracker with DRF backend and React frontend — token auth, serializers, full CRUD, category management, and expense visualization with chart breakdowns

GolfBros | *Django REST Framework · React · PostgreSQL · Railway* golfbros.org

- Full-stack golf community platform where players log rounds, share course reviews, and track performance over time
- User authentication, full CRUD for posts and rounds, PostgreSQL on Railway

Archery Answers | *Django · PostgreSQL · Railway* Live Site

- Domain-specific arrow ballistics calculator — configure shaft, point, and fletching to get real-world kinetic energy and momentum results
- Users save and compare custom builds — built for a community that cares about precision

End-to-End Personal Finance Data Analysis | *Python · Pandas · SQLite · Scikit-learn* GitHub

- Full data pipeline from raw CSV through SQL analysis, visualization, and Linear Regression forecasting
- Demonstrates data understanding that informs better AI prompt and retrieval design

EDUCATION

Bachelor of Science, Computer Science — University of Maryland Global Campus | *In Progress*
Associate of Applied Science — WSU Tech | *2019 – 2021*
