

JEREMIAH EMRICH

Python Developer · AI/LLM Applications · Full-Stack Django

Haven, KS (Remote) · jemrich.dev · github.com/jemrich18 · linkedin.com/in/jeremiah-e-064bb0391

SUMMARY

Python developer with 11 shipped, deployed applications built in 12 months — including two production AI/LLM applications, a live client booking platform, and multiple full-stack Django projects. Comfortable owning the full stack from schema design to cloud deployment. Hands-on experience with LangChain, LangGraph, RAG pipelines, and the OpenAI API. Currently adding AWS to complement existing Railway/Docker deployment experience. Seeking a remote Python or AI-adjacent role where I can build real things and grow fast.

TECHNICAL SKILLS

AI / LLM: OpenAI API, LangChain, LangGraph, RAG pipelines, ChromaDB, vector search, structured output, prompt engineering

Backend: Python, Django, Django REST Framework, REST API design, PostgreSQL, SQLite, token authentication

Frontend: JavaScript, React, responsive UI, chart-based data visualization, Streamlit

Infrastructure: Railway, Docker, Git, GitHub Actions, CI/CD pipelines, cloud deployment — AWS in progress

Data: Pandas, NumPy, Scikit-learn, Plotly, Jupyter Notebook

Testing: pytest, unit testing

PROJECTS

Job Application Assistant (AI) | *Django · LangChain · OpenAI · ChromaDB · Railway* Apr 2026 – Present

fitformyrole.com

- Full-stack RAG application — parses resume PDFs, embeds into a vector store, retrieves context to score job match percentage and generate tailored cover letters using GPT-4o-mini with structured output
- Demonstrates end-to-end LLM product ownership: PDF parsing, vector embedding pipeline, OpenAI API integration, and production deployment with custom domain

Hunting AI Assistant (AI) | *Django · LangGraph · LangChain · OpenAI · Railway* Apr 2026 – Present

aihuntingchat.com

- LangGraph state machine agent with multi-node query routing across 10+ topic domains — routes plain-English queries to live weather tools, knowledge base Q&A, and conversation memory
- Engineered specifically to prevent hallucination on regulation-sensitive topics; demonstrates ability to design and ship production agentic AI systems end to end

Erin the Estie ★ **Live Client** | *Django · PostgreSQL · Gmail SMTP · Railway* 2025 – Present

erinthiestie.com

- Built a full-stack booking platform for a real paying client — custom appointment booking system with approval workflow, service menu management, and mobile-optimized admin dashboard
- First production app built for someone else — handled requirements gathering, iterative delivery, and ongoing maintenance; deployed to Railway with custom domain

WeatherRack | *Django · Open-Meteo API · PostgreSQL · Railway* Mar – Apr 2026

theweatherrack.com

- Integrates Open-Meteo REST API to pull 10-day forecast data and applies multi-variable scoring logic across wind, barometric pressure, temperature, and moon phase to rank best hunting days
- Location management, responsive dark-mode UI; fully deployed with custom domain

FAA Aviation Incident Dashboard | *Python · Pandas · Plotly · Streamlit* May 2026

- Interactive dashboard analyzing 39,000+ US aviation incidents from the NTSB database with dynamic filters, KPI metrics, trend analysis, and US choropleth map

- Built by an FAA-certified A&P mechanic — domain expertise informing data interpretation beyond the numbers; demonstrates real-world data handling at scale

Budget App | *Django REST Framework · React · PostgreSQL · Railway*

Jan – Mar 2026

- Full-stack budget tracker — DRF backend with REST API, token authentication, and full CRUD endpoints; React frontend with expense visualization and chart breakdowns
- Includes pytest unit tests and GitHub Actions CI/CD pipeline; deployed on Railway

GolfBros | *Django REST Framework · React · PostgreSQL · Railway*

Jan – Feb 2026

golfbros.org

- Full-stack golf community platform — players log rounds, share course reviews, and track performance; DRF backend with user authentication and full CRUD, React frontend

RAG Pipeline Fundamentals | *Python · ChromaDB*

Apr 2026

- Built a RAG pipeline from scratch to deeply understand chunking, embeddings, vector search, and retrieval before applying concepts to production applications — not a tutorial follow-along

EDUCATION

Bachelor of Science, Computer Science

Expected 2027

University of Maryland Global Campus

Relevant coursework: Algorithms, Data Structures, Databases, Software Engineering

Associate of Applied Science

2019 – 2021

WSU Tech

FAA Certified A&P Mechanic
