

JEREMIAH EMRICH

Full-Stack Python Developer · Django · React · PostgreSQL · AI/LLM

Haven, KS (Remote Only) · github.com/jemrich18 · linkedin.com/in/jeremiah-e-064bb0391 · jemrich.dev

SUMMARY

Self-taught full-stack developer who went from zero to 11 shipped, deployed projects in 12 months — including two production AI applications, a live client site, and a personal portfolio. I build real things and deploy them: Django backends, React frontends, PostgreSQL databases, LangChain/LangGraph AI agents, and RAG(Retrieval Augmented Generator) pipelines. Comfortable owning the full stack from schema design to cloud deployment. Seeking a remote full-stack or backend Python role.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend: Django, Django REST Framework, REST API design, serializers, token authentication, PostgreSQL, SQLite

Frontend: React, component architecture, CRUD operations, responsive UI, chart-based data visualization, Streamlit

AI / LLM: OpenAI API, LangChain, LangGraph, RAG pipelines, ChromaDB, vector search, structured output

Infrastructure: Railway, Docker, Git, GitHub, CI/CD pipelines, cloud deployment, custom domains

Testing: pytest, unit testing, GitHub Actions

Data: Pandas, NumPy, Scikit-learn, Plotly, Jupyter Notebook

PROJECTS

Erin the Estie ★ Real Client | *Django, PostgreSQL, Railway*

2025 – Present

- Built a full-stack booking platform for a real client — custom appointment booking system with approval workflow, service menu management, and mobile-optimized admin dashboard
- Django backend with Gmail SMTP integration; deployed to Railway with custom domain at eritheestie.com
- First production app built for someone else — requirements gathering, iterative delivery, and ongoing maintenance

Job Application Assistant (AI) | *Django, LangChain, OpenAI, ChromaDB, Railway* | fitformyrole.com Apr 2026 – Present

- Full-stack RAG application — parses resume PDFs, embeds into a vector store, retrieves context to score job match percentage and generate tailored cover letters
- Demonstrates full-stack ownership: PDF parsing, OpenAI API integration, structured output, production deployment with custom domain

Hunting AI Assistant (AI) | *Django, LangGraph, LangChain, OpenAI, Railway* | aihuntingchat.com Apr 2026 – Present

- LangGraph state machine agent with multi-node query routing across 10+ topic domains; routes plain-English requests to live weather tools, knowledge base Q&A, and conversation memory
- Deployed to Railway with custom domain; demonstrates ability to design and ship agentic AI systems end to end

WeatherRack | *Django, Open-Meteo API, PostgreSQL, Railway* | www.theweatherrack.com Mar 2026 – Apr 2026

- Integrates Open-Meteo REST API to pull 10-day forecast data and applies multi-variable scoring logic across wind, barometric pressure, temperature, and moon phase for deer hunters
- Location management, responsive dark-mode UI; deployed at theweatherrack.com

- Budget App** | *Django REST Framework, React, PostgreSQL, Railway* Jan 2026 – Mar 2026
- Full-stack budget tracker — DRF backend with REST API design, serializers, token authentication, and full CRUD endpoints for expenses and categories
 - React frontend with expense visualization via chart breakdowns and responsive UI; pytest unit tests with CI/CD pipeline on Railway
- GolfBros** | *Django REST Framework, React, PostgreSQL, Railway* | www.golfbros.org Jan 2026 – Feb 2026
- Full-stack golf community platform — players log rounds, share course reviews, and track performance over time
 - DRF backend with user authentication and full CRUD; React frontend; live at golfbros.org
- FAA Aviation Incident Dashboard** | *Python, Pandas, Streamlit, Plotly* | [Live on Streamlit](#) May 2026
- Interactive dashboard analyzing 39,000+ US aviation incidents from the NTSB database with dynamic filters and drill-down visualizations
 - Demonstrates real-world data handling at scale — cleaning, querying, and visualizing a large public dataset
- Archery Answers** | *Django, PostgreSQL, Railway* | [Live on Railway](#) Mar 2026
- Domain-specific arrow ballistics calculator — users configure shaft, point, and fletching to get kinetic energy, momentum, and ethical harvest thresholds by game animal
 - Users save and compare custom builds; PostgreSQL-backed with Railway deployment
- End-to-End Personal Finance Analysis** | *Python, Pandas, SQLite, Scikit-learn, Streamlit* | [Live on Streamlit](#) Jul 2025 – Aug 2025
- Full data pipeline from raw CSV through SQL analysis, visualization, and linear regression forecasting — demonstrates backend data handling and analysis skills
 - One of the first substantial projects built; shows the foundation that led to more complex production apps
- RAG Pipeline Fundamentals** | *Python, ChromaDB* | [View on GitHub](#) Apr 2026
- Built a RAG pipeline from scratch to deeply understand chunking, embeddings, vector search, and retrieval before applying it to production apps — not a tutorial follow-along

EDUCATION

Bachelor of Science, Computer Science Expected 2027
 University of Maryland Global Campus
Relevant coursework: Algorithms, Data Structures, Databases, Software Engineering

Associate of Applied Science 2019 – 2021
 WSU Tech
