

JEREMIAH EMRICH

Backend Software Engineer — Python / Django

Haven, KS | Open to Remote | jemrich18@gmail.com | jemrich.dev | github.com/jemrich18 | linkedin.com/in/jeremiah-emrich-064bb0391

SUMMARY

Backend software engineer specializing in Python and Django — REST APIs, database-driven applications, and real-time systems from schema design through deployment. Shipped a production Django platform for a paying client (PostgreSQL, approval workflows, email notifications) and a SaaS product with JWT authentication and Stripe billing. Experience with Django REST Framework, Django Channels, WebSockets, Redis, Docker, and CI/CD. FAA-certified Airframe mechanic background brings process discipline and documentation rigor to backend system design. Completing a B.S. in Computer Science; seeking a Backend Software Engineer or Django Developer role.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript

Backend & APIs: Django, Django REST Framework (DRF), REST API Design, JWT Authentication, Django Channels, WebSockets, ORM Design

Databases: PostgreSQL, SQLite, Redis, Schema Design, Data Modeling

Testing & Quality: pytest, Unit Testing, Integration Testing, Test-Driven Development

DevOps & Infrastructure: Docker, Git, GitHub Actions, CI/CD, Railway, Gunicorn, Linux

Frontend (supporting): React, htmx, Responsive UI

AI/ML Tooling: OpenAI API, Retrieval-Augmented Generation (RAG), ChromaDB, Vector Embeddings

Practices: Agile, Requirements Gathering, Client Communication, Technical Documentation

EXPERIENCE

Freelance Backend Developer (Django) — Self-Employed

2025 – Present

- Designed and built a full-stack Django backend for a paying client's booking platform (erintheestie.com): PostgreSQL schema design, an approval-based booking workflow, and Gmail SMTP notification integration
- Owned the project end to end — requirements gathering, backend architecture, deployment, and ongoing client support and iteration; modeled a booking status workflow (pending / approved / declined) that automatically routes the correct notification to the customer
- Deployed to Railway on a custom domain with CI/CD via GitHub Actions; currently integrating Stripe for online payments

PROJECTS

Fit For My Role — Django, Django REST Framework, OpenAI API, ChromaDB

fitformyrole.com

- Built a Django-based retrieval-augmented generation (RAG) pipeline: parses resumes with pdfplumber, chunks and embeds the text into ChromaDB, then retrieves relevant content via similarity search to ground GPT-4o-mini's skill-match scoring and cover letter generation
- Integrated external job-board REST APIs (Remotive, Arbeitnow) to aggregate live listings and score them against a resume on demand

TrackMyHandicap — Django REST Framework, PostgreSQL, React, TypeScript, Stripe

trackmyhandi.com

- Built a Django REST Framework API implementing the full WHS golf handicap formula from user-submitted round data, replacing a \$60/year official subscription
- Implemented JWT authentication for a DRF API consumed by a separate React/TypeScript frontend; integrated Stripe for a planned premium tier

OurCushion — Django, Django Channels, WebSockets, Redis, PostgreSQL, htmx

Personal project

- Built a real-time household finance tracker: balance and expense updates push instantly to both partners over WebSockets via Django Channels and Redis, with graceful degradation to standard page loads if Redis is unreachable

EDUCATION

B.S., Computer Science — University of Maryland Global Campus

Expected 2029

Relevant coursework: Algorithms, Data Structures, Databases, Software Engineering

A.A.S., FAA Airframe Mechanic — WSU Tech

2019 – 2021

FAA Airframe & Powerplant (A&P) Certificate — safety-critical systems, technical documentation, precision diagnostics
