

JEREMIAH EMRICH

Software Engineer — Python / Django

Haven, KS · Open to Remote · jemrich.dev · github.com/jemrich18 · linkedin.com/in/jeremiah-emrich-064bb0391

SUMMARY

Software engineer with a Python/Django focus, building REST APIs, real-time systems, and data-driven applications end to end — from schema design through deployment. Shipped a live client-facing booking platform and a subscription SaaS product with authentication and payment processing. Background as an FAA-certified Airframe mechanic brings process discipline and precision to how I build and document software. Completing a B.S. in Computer Science; targeting software engineering and backend roles.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Backend & APIs: Django, Django REST Framework, REST API design, JWT authentication, Django Channels, WebSockets

Data: PostgreSQL, SQLite, Redis, ORM design, schema modeling

Frontend: React, htmx, responsive UI

Infrastructure: Docker, Railway, Git, GitHub Actions, CI/CD

Testing: pytest, unit and integration testing

AI/ML tooling: OpenAI API, RAG pipelines, ChromaDB, vector embeddings

EXPERIENCE

Freelance Backend Developer — Self-Employed

2025 – Present

- Delivered a full-stack booking platform for a paying client (eritheestie.com): appointment scheduling, an approval-based booking workflow, service menu management, and a mobile-optimized admin dashboard
- Owned the project end to end — requirements gathering, PostgreSQL schema design, backend logic, Gmail SMTP notification integration, deployment, and ongoing client support and iteration
- Modeled a booking status workflow (pending / approved / declined) so client decisions automatically route the correct notification back to the customer
- Deployed to Railway on a custom domain; currently integrating Stripe for online payment

PROJECTS

Fit For My Role — Django, DRF, OpenAI API, ChromaDB

fitformyrole.com

- Built a retrieval-augmented generation pipeline: parses uploaded resumes with pdfplumber, chunks and embeds the text, and stores it in a ChromaDB vector store
- Retrieves the most relevant resume content by similarity search against a job description to ground GPT-4o-mini's skill-match scoring and generated cover letter in the candidate's real experience
- Also aggregates live listings from external job-board APIs (Remotive, Arbeitnow) and scores them against a resume on demand

TrackMyHandicap — Django REST Framework, React, TypeScript, Stripe

trackmyhandi.com

- Built a DRF API implementing the full WHS golf handicap formula from user-submitted round data, replacing a \$60/year official subscription
- JWT-authenticated API consumed by a separate React/TypeScript frontend; Stripe integrated for a planned premium tier
- Rounds capture course and weather conditions alongside score, enabling users to see performance trends by condition and by miss type

OurCushion — Django, Django Channels, WebSockets, Redis, htmx

Personal project

- Real-time household finance tracker: balance and expense updates push instantly to both partners over WebSockets, with no page refresh or polling
- Built graceful degradation into the real-time layer — a WebSocket connection that can't reach Redis still serves a fully working app via standard page loads instead of failing outright
- Automated recurring bill generation via a scheduled management command, with correct handling of month-end edge cases

EDUCATION

B.S., Computer Science — University of Maryland Global Campus

Expected 2027

Relevant coursework: Algorithms, Data Structures, Databases, Software Engineering

A.A.S., FAA Airframe Mechanic — WSU Tech

2019 – 2021

FAA Airframe & Powerplant (A&P) Certificate — safety-critical systems, technical documentation, precision diagnostics
